A lamp crystal comprising: a transparent body formed with an outwardly open bore and having an outer surface that has a region with a semitransparent matte finish an that is substantially smooth, transparent, and polished except at the matte-finish region; and a light-emitting diode fixed in the bore and having electrical supply wires sufficiently strong to hang the crystal from above.

The following is an examiner's statement of reasons for allowance: Regarding claim 1, nowhere in the prior art is found a lamp crystal having a semitransparent matte finish and that is substantially smooth, transparent and polished except at the matte-finish region, and a light emitting diode fixed in the bore having electrical wires to hang the crystal by.
